

# Miva® Script *compiler*™

## **Miva Script Compiler 1.14** **Release Note** Revision 1.0

## Bug Fixes:

1. MvCALL now generates the correct code if the HEADERS attribute is used without the CERTFILE or CERTTYPE attribute.
2. MvINCLUDE now correctly resolves external function references at the end of the top-level source file, rather than at the end of each file.
3. MvASSIGN now gives an error if the NAME attribute is missing, preventing stack leakage at runtime.
